Capturing

Will ClipMate 7 overwrite my ClipMate 6 (or ClipMate 5) data?

No, ClipMate 6 and 7 will install its databases into a different folder than previous versions.

If you are migrating from v6 to v7, you should backup your v6 database and then restore that backup into v7. Use File | Database Maintenace | Backup Database (and Restore Database), respectively.

When moving from v5 to v7, the databases are not compatible at all, so you need to use the [data migration utility](#) .
